

Table 8. UC Kearney Alfalfa Cultivar Trial 2000-2001 Yields. Trial planted 9/16/99

Note: In this trial, there are varieties with varying Fall Dormancy (FD) scores, which may affect quality, persistence, as well as yield. These FD scores were provided by the companies. Also see FD scores from experimental data in this report.

Variety X Year interaction is significant

Trial seeded at 25 lb/acre viable seed on Hanford fine sandy loam soil at the Univ. of Calif. Kearney Agricultural Center, Parlier, CA. Entries followed by the same letter are not significantly different at the 5% probability level according to Fishers (protected) LSD.
